

Suicides in England

Age groups with highest suicide rate per 100,000

Suicide rate per 100,000 in England 2010-2024

The overall, male, and female suicide rates in England have remained relatively unchanged in 2024, compared with 2023.

Males are 3 times more likely to die by suicide in England than females.

Notes about data: Data source – Office for National Statistics (ONS). Suicide refers to deaths where the underlying cause is intentional self-harm and events of undetermined intent. Data represents suicide registrations. Increases/decreases are based on one year of data. These may not indicate longer term trends and may not be statistically significant. Overall rates for male, female and all persons are age standardised. Rates broken down by age group are crude.

Appendices

England suicide numbers for all persons, males and females and by age group, 2022–2024

Table 1

England	2022			2023			2024		
Number of deaths for persons aged 10+	Overall 5,284	Male 3,909	Female 1,375	Overall 5,656	Male 4,188	Female 1,468	Overall 5,717	Male 4,231	Female 1,486

It is ONS best practice not to calculate rates based on such small numbers, as they are imprecise and susceptible to inaccurate interpretation. Age-specific rates based on less than 20 deaths are marked with a "*" to warn users that their reliability is low.
